

Dai Tonghua

Algorithm Engineer · Algorithm–Hardware Co-Design · PhD Candidate

+86 132-4259-9537 · +7 916-069-94-36 · daitonghua@gmail.com · daitonghua.github.io/resume · hse.ru/org/persons/870178600

CORE AREAS

- Core capability: **dual-stack algorithm × hardware co-design** — algorithm side covers model, optimization and quantization algorithms; implementation side covers FPGA / ASIC and RTL, with on-chip deployment cost as the ultimate optimization target.
- Quantization algorithms**: end-to-end model / signal quantization — mixed-precision quantization, quantization-aware training (QAT), improved quantization operators, gradient and iterative optimizer-state compression; unified bit-width optimization across parameters, signal path, storage, gradients and optimizer, **losslessly down to X bit** versus the engineering baseline.
- Chip design**: PPA-driven algorithm–hardware co-design, with scheme trade-offs forced by ASIC resource limits; lossless low-cost low-power schemes based on approximate computing and approximate operators; contributed to RTL implementation and to the FPGA (+ ROC) algorithm verification platform, spanning the algorithm → RTL → FPGA chain. RF nonlinear-compensation (DPD) model quantization lands under exactly these constraints.
- Wireless sensing algorithms**: defined and solved the generalized Wi-Fi cross-domain sensing problem, including single-link zero-effort cross-domain recognition, open-set gesture detection and few-shot open-set recognition.
- Mathematical foundation**: MIPT Applied Math & Physics, GPA 5.0/5.0; B.Sc. in applied mathematics and physics, passed the Landau's Theoretical Minimum in theoretical physics, with an SCI Q2 paper (*Ultrasonics*); algorithms derived from first principles.

SKILLS

Algorithms	Neural networks	NN quantization	DPD / nonlinear compensation	Communication algorithms / DSP	Wireless sensing	Few-shot / open-set learning
Hardware	RTL design / Verilog	FPGA / ASIC	Approximate computing / fused operators			
Engineering	Python	MATLAB	C++			
Languages	Chinese (Native)	Russian (Fluent)	English (Professional)			

PROFESSIONAL EXPERIENCE

Algorithm Engineer — Huawei Technologies, Moscow LRI

Oct 2021 – Present

Quantization & algorithm–hardware co-design (Fellow team)

- The RF nonlinear-compensation model (online-training-like NN) is resource-constrained on ASIC. Designed a quantization scheme covering parameters, signal path, storage and iterative optimizer; developed a whole-model quantization framework for the full RF front-end chain — mixed-precision quantization, QAT, advanced quantization operators, with PPA-driven scheme design; versus the engineering baseline this is **lossless down to 4–12 bit**, with **chip resources down over 30% per generation** at equal performance.
- Implemented unified bit-width optimization across parameters, signal path, storage and optimizer for the online-training model, keeping convergence fast at low bit-width.
- Owned lossless low-cost, low-power schemes based on approximate computing and approximate operators; led ASIC frontier exploration with local academic collaborators.
- Contributed to version improvements and debugging of the FPGA + ROC algorithm verification platform, spanning the algorithm → RTL → FPGA verification chain.

Awards: Golden Seed Award · 2022 Annual Best Support · Continuous Contribution

Invited Lecturer — HSE University

Jan 2025 – Jul 2025

<https://www.hse.ru/en/edu/courses/904327944>

- Sole lecturer of *Systems and Networks of Information Transfer* (principles of communication networks and basic data-transfer protocols), taught bilingually in Russian and English.

RESEARCH

DPD Coefficient Quantization — M.Sc. Thesis — MIPT

2021 – 2023

- Developed quantization methods for digital predistortion (DPD) coefficients, enabling low-power algorithm implementation for communication RF digital chips; together with industry RF nonlinear-model quantization this forms a complete DPD algorithm-to-hardware chain.
- Thesis: Development of quantization methods for digital predistortion coefficients
- Advisor: internal expert (MIPT–Huawei joint program, IRF Lab)

Wi-Fi Generalized Cross-Domain Gesture Recognition — Ph.D. Thesis — HSE University

2023 – 2027 (expected)

- methods of Wi-Fi-based gesture recognition under generalized cross-domain tasks. Independently framed the proposal and formally generalized the Wi-Fi cross-domain sensing problem, establishing a new research direction.
- First Wi-Fi-based **single-link, zero-effort cross-domain** gesture recognition system.
- First **few-shot open-set recognition** framework for Wi-Fi gesture recognition.
- First **out-of-distribution detection** framework for Wi-Fi gestures robust to semantic and covariate shift.
- First few-shot Wi-Fi gesture recognition method addressing **support–query shift** under dual cross-domain settings.

- Thesis: Methods of Wi-Fi-based gesture recognition in generalized cross-domain tasks
- Advisor: Evgeny Khorov (Head of Wireless Networks Lab at IITP RAS)

Magnetoelastic Waves — B.Sc. Thesis — MIPT

2020 – 2021

- Studied propagation and coupling of magnetoelastic waves in irregular heterogeneous structures for novel signal-processing devices; published as first author in *Ultrasonics* (Q1).
- Thesis: Magnetoelastic waves in irregular structures
- Advisor: Sergey Nikitov (Director of IRE RAS)

EDUCATION

Ph.D. — HSE University

2023 – 2027 (expected)

Communication Systems, Networks and Devices
Russian Government Scholarship

M.Sc. with Distinction — Moscow Institute of Physics and Technology (MIPT)

2021 – 2023

Applied Mathematics and Physics · GPA 5.0/5.0
MIPT–Huawei joint program
Russian Government Scholarship · China Scholarship Council (CSC)

M.Sc. Core Courses

Signal Processing & Communications — Adaptive Filtering Theory · Fundamentals of Digital Signal Processing · Digital Signal Processing Laboratory · Digital Transmission Systems with OFDM · Spatial Signal Processing in Modern Wireless Communications · DSP in Fiber-Optic Communication Lines
Radio Electronics & SDR — Software Defined Radios (SDR) · EMC of Radioelectronic Equipment · Radio Electronic Systems

B.Sc. — Moscow Institute of Physics and Technology (MIPT)

2016 – 2021

Applied Mathematics and Physics · GPA 4.6/5.0
Russian Government Scholarship

B.Sc. Mathematics Courses

Mathematical Analysis — Introduction to Analysis · Multidimensional Analysis, Integrals and Series · Multiple Integrals and Field Theory · Harmonic Analysis
Other Mathematics — Functions of a Complex Variable · Equations of Mathematical Physics · Linear Algebra · Analytic Geometry · Differential Equations · Computational Mathematics
Probability & Random Processes — Probability Theory · Random Processes

B.Sc. Physics Courses

Theoretical Physics — Analytical Mechanics · Field Theory · Quantum Mechanics · Statistical Physics
General Physics — Mechanics · Electricity & Magnetism · Thermodynamics & Molecular Physics · Optics · Quantum Physics
Other — Solid State Physics · Micro- and Nanoelectronic Semiconductor Devices

COMPETITIONS & AWARDS

Huawei Cup Wireless Communication Algorithm Contest — 1st Prize 2025

Lightweight neural network design and implementation for SVD of large-scale MIMO channel matrices; technical lead of a 2-person team, owning model lightweighting and training methodology; 1st Prize in a three-round contest, ranked 2nd overall out of 100+ teams.

HSE Ph.D. Quota Selection — Winner 2023

University-wide doctoral topic competition; research proposal reviewed and defended before experts, awarding a full state-funded Ph.D. place.

Russian Opendoors Olympiad, Physics Track — Winner 2021

Advanced comprehensive physics examination covering classical mechanics, electromagnetism, thermodynamics and quantum physics; awarded a full state-funded M.Sc. place.
